

ABSTRACT

A device for cleaning the inside of tanks or other storage containers used in the transporting or storage of liquids comprises a hollow, continuous, rigid pipe having a straight portion and a curved portion, the straight portion having a connecting end for connecting to a source of cleaning fluid, the curved portion being substantially semicircular and having a nozzle end for emitting a stream of cleaning fluid. The jet of cleaning fluid is directed against the inside walls and bottom of the tank facilitating removal of residual product and sediment.
